- Understanding of: , basic java, Python, Databases: (MySQL)
- Operating system: Linux, windows 10

### **Work Experience**

#### **Netpaisa**

**june 2021 - Present**

##### *Developer*

- Developed MIS portal for the business purpose and data analysis by using php sql.
- Making Api and also Api integration . Recently I m integrate the api of recharge and making 4 api first one is plan api , transaction api, status api, balance check api and callback api and now my project is completed and services is going on properly.
- I just work in fintech domain company that's why I'm worked on service like recharge, payout issue handling.
- I also work on the software of netpaisa for the some updation and also work on dashboard making report of the services and displaying at the panel with the filtered date.
- Resolve the tickets generated by customer related to development and transaction and some updation about the panel.  
I worked on Bharat bill payment service api integration , water bill payment, Electricity bill payment, emi, insurance and gas bill payment

#### **Database administrator**

- I also work as a junior DBA here and find the MIS data at the every month end.
- Updating the database according to need and managing the database.
- Running all type of query like update , delete, create insert and etc.
- I also Making a management portal where the all data is present in well mannered and all data is dynamic because all data will be change there in every 5 minutes and the logic behind it by the help of server crontab the bat file running in every 5 min automatically and all files are running according to bat file and data is regenerate and finally changed the data on portal.
- In this project I used SQL for data and perl for summarised the data on the basis of key value and select the data with index and Linux command is used to shorting the file by index value , joining command for join the two file on the basis of key and the final data will be show on portal by the help of php language.
- I have also knowledge about how to set the crontab on the server with and time like the file is run one time in a whole day and the files run in every 2 min .
- Some knowledge about server setup like how PEM file converter in PPK file and login the server transferred the data by ftp and I have knowledge about Filezilla FTP.

### **Academic Projects**

#### **Online examination system**

**2021**

- This php, html, css and sql based project. The purpose of the online examination system is to test the subject knowledge of the Students. Such a system eliminates logistical hassles and drawbacks in the Traditional mode of the pen-and-paper examination. Students don't have to assemble in the classroom to give the exam

### **Education**

**Kanpur institute of technology, Kanpur**

**July 2017 – Aug 2021**

*Bachelor of Technology, Computer Science with 81%*
